

# Calla Lily, Black

## COLD CLIMATE

NOTE! This document is tailored for cultivation attempts in colder climates, USDA Zone 6 or below.

A separate document is available for growth in warmer climates.

### Midnight Black Montevideo Calla Lily:

These will need to be grown in pots indoors in your zone, but most people grow them this way anyway. Fill at least an 8 inch wide pot, preferably with some depth for the roots, with a premium potting soil. Place the bulb so that the eye(s) are facing upwards. Plant the bulb just deep enough that the very top surface of the bulb is visible. Wet the soil and keep it evenly moist but not wet. Place in the brightest window possible, preferably one that receives direct sun (southern facing, then western facing is best) or use a grow light. Calla bulbs typically sprout in 2 weeks. Many people treat Calla lilies as annuals but they are actually perennials. After blooming and if foliage starts to decline, allow the plant to die back and withhold watering for 2 months. Calla lilies need at least 2 months of rest per year for new growth and to produce new bulbs. You can just leave them in the pot and put them out of the light. After two months have passed, begin watering again and place back into sunlight.

My seeds, bulbs and bare root plants are guaranteed to provide you with a decent yield. If you are dissatisfied with your order for any reason or the seeds don't sprout, please message me before leaving a review and I will provide advice, replace or refund. I truly care about my customers and my plants! Please do not hesitate to contact me with any questions you may have.

Happy Planting!  
Kimberly (SeedCult)

## Seed Storage Guidelines

For delayed planting, proper storage ensures seed viability. Seeds require cool, dark, and dry conditions. Retain seeds in the food-grade plastic bag provided, place the bag inside a sealed glass jar, and cover with an opaque bag or material to block light. Ideal storage locations include basements or refrigerators. Refrigeration is essential for certain species, including poppies. Under proper conditions, most seeds remain viable for 1-5 years, depending on species.

## Satisfaction Guarantee

Seedcult guarantees all seeds, bulbs, and bare root plants to provide satisfactory yields. Customers who experience germination issues or are dissatisfied for any reason are encouraged to contact Seedcult prior to leaving a review. Replacement, refund, or expert guidance will be provided. Customer satisfaction and plant success are core priorities.

Seedcult is a Florida-based specialty seed company operating exclusively through online sales and direct shipping. Our catalog encompasses a comprehensive range of seed varieties, with particular expertise in rare cultivars and exotic hybrids.

Seedcult maintains an unwavering commitment to non-GMO seeds. This principle was established at our founding and remains embedded in the DNA of our company charter. It is a commitment from which we will never deviate.
